Kirklees College Service Opportunity Report

Detailed Build Blueprints Aligned to the Existing SensAI Platform

This version explicitly describes what you would build for each idea using the components already present in `nuffield-health`.

Date: 1 March 2026
Audience: Partner discussion and commercial strategy
Scope: Full idea list, concrete build shape, pros/cons, and data accessibility scoring (public data scores higher)

1. Existing Platform Building Blocks (Already Built)

These are the concrete modules this report assumes you will reuse:

- **Pipeline orchestration:** `src/scraper/run.ts` (stage pipeline, retries, status tracking).
- **Parse and score engine:** `src/scraper/parse.ts`, `src/scraper/assess.ts`, `src/scraper/score.ts`.
- **Database model:** `src/db/schema.ts` with run snapshots, flags, review state, rewrites, and evidence tables.
- **Explorer and filters:** consultant explorer patterns in `src/app/consultants`.
- **Action centre:** prioritized uplift workflow in `src/app/actions`.
- **Review queue:** low-confidence and fail-flag handling in `src/app/consultants/review`.
- **Copilot:** natural-language data querying in `src/components/ui/ai-copilot.tsx` and `src/app/api/copilot/route.ts`.
- **Reports:** PDF and CSV flows in `src/app/reports` and export APIs.
- **Configuration controls:** score/tier controls in `src/app/configuration`.

> **Interpretation rule used below:** "What you would build" means a domain-adapted variant of the same architecture pattern: data job(s) -> deterministic + AI scoring -> explorer dashboards -> action queue -> review workflow -> board reporting.

2. Data Accessibility Scoring Rule

Score	Meaning	Effect on Go-to-Market
5	Mostly public/open reusable data. Minimal licensing friction.	Fastest legal/commercial path.
4	Mainly public data with some terms-of-use caveats.	Good speed, moderate diligence.
3	Mixed model: public data + internal college data.	Needs data-sharing and governance setup.
2	Mainly internal/proprietary institutional data.	Higher dependency on client systems/data quality.
1	Heavy external proprietary/licensed dependency.	Highest cost and legal dependency risk.

3. Longlist Snapshot with Data Access Quality

#	Idea	Main Outcome	Fee Signal	Data Access (1-5)
1	Employer Acquisition and Retention Intelligence	Grow and protect employer accounts	Medium-High	3
2	Apprenticeship Pipeline Intelligence	Improve recruitment/completion outcomes	Medium-High	2
3	Skills Demand and Curriculum Radar	Align curriculum to labour demand	Medium	4
4	Ofsted Improvement Intelligence	Action and evidence control	Medium-High	3

#	Idea	Main Outcome	Fee Signal	Data Access (1-5)
5	Attendance and Withdrawal Risk Intelligence	Reduce drop-off risk	Medium	2
6	Course Recruitment Conversion Intelligence	Improve enquiry to enrolment conversion	Medium	2
7	Course Content Quality Scoring and Rewrite	Improve quality of course pages	Medium	4
8	SEND and High-Needs Progression Intelligence	Improve support/progression outcomes	Medium	2
9	Work Placement and T Level Capacity Intelligence	Match placement supply and demand	Medium	3
10	Funding Opportunity and Bid Intelligence	Improve bid selection and hit-rate	Low-Medium	5
11	Student Destination and Outcomes Intelligence	Track progression outcomes	Medium	3
12	Timetable and Room Utilization Intelligence	Increase estate efficiency	Medium	2
13	Competitor Offer Intelligence	Track regional competitor moves	Low-Medium	4
14	Green Skills Impact Intelligence	Evidence green skills and sustainability impact	Low-Medium	4
15	Reputation and Community Signal Intelligence	Early warning on sentiment issues	Low-Medium	3

4. Detailed Idea Build Blueprints (What You Would Actually Build)

1) Employer Acquisition and Retention Intelligence Fee: Medium-High

What you would build:

- **Data jobs:** ingest employer CRM account data, apprenticeship vacancies, account touchpoint history, and public company sector signals.
- **Scoring model:** employer health score (engagement recency, placements filled, apprenticeship outcomes, churn risk indicators).
- **Pages/modules:** Employer Explorer (consultant-table pattern), Employer Benchmark (hospital comparison pattern), At-Risk Accounts queue (review queue pattern).
- **Action centre:** auto-prioritized actions like "recover inactive employer", "upsell standards", "fix conversion bottlenecks".
- **Copilot/reporting:** NL queries for account risk and monthly employer growth board PDF.

Data accessibility: 3/5 (mixed public and internal CRM/MIS data).

Pros

- Directly linked to employer growth.
- Clear commercial language.
- Strong recurring usage by account teams.

Cons / Risks

- Needs disciplined CRM updates.
- Cross-team ownership required.
- Attribution arguments possible.

2) Apprenticeship Pipeline Intelligence Fee: Medium-High

What you would build:

- **Data jobs:** vacancy demand feed, application pipeline stages, on-program attendance/progress, completion status by standard/employer.
- **Scoring model:** pipeline velocity score + completion risk score + employer demand match score.
- **Pages/modules:** Apprenticeship Funnel dashboard, Standards Performance explorer, Employer x Standard heatmap.
- **Action centre:** prioritized actions for stalled applicants, high-risk cohorts, and standards with weak completion trend.
- **Exports:** weekly operational list (team execution) and monthly executive summary.

Data accessibility: 2/5 (mostly internal data dependencies).

Pros

- Strong alignment to strategic priority.
- High operational value.
- Ties directly to outcomes and funding.

Cons / Risks

- Multiple internal systems involved.
- Data quality and ownership needed.
- Can expose process weaknesses.

3) Skills Demand and Curriculum Radar Fee: Medium

What you would build:

- **Data jobs:** pull public labour-market data, local job-posting trends, employer feedback themes, and current enrolment trend inputs.
- **Scoring model:** course-market fit score, demand momentum score, and curriculum risk/opportunity ranking.
- **Pages/modules:** Curriculum Opportunity Map, Sector Demand board, Course viability list with confidence flags.
- **Action centre:** recommendations to expand, reshape, or review low-fit provision.
- **Reports:** termly curriculum planning pack and stakeholder narrative.

Data accessibility: 4/5 (public-data-heavy with light internal overlay).

Pros

- Good strategic value.
- Public data supports speed.
- Supports external engagement story.

Cons / Risks

- Signal lag/noise in market data.
- Needs careful confidence messaging.
- Impact can be medium-term.

4) Ofsted Improvement Intelligence Fee: Medium-High

What you would build: quality-theme tracker where each action has owner, due date, evidence, and status; mapped to inspection themes with monthly confidence scoring and governance reporting.

- Use action and review queue patterns already present in `/actions` and `/consultants/review`.
- Add evidence quality score and unresolved risk flags.
- Generate monthly quality board PDF and action completion trend charts.

Data accessibility: 3/5 (public framework, internal evidence data).

Pros: urgent and board-visible. **Cons:** requires strong definitions and change discipline.

5) Attendance and Withdrawal Risk Intelligence Fee: Medium

What you would build: attendance and withdrawal risk engine with cohort/course risk ranking, intervention queue, and resolution tracking.

- Daily/weekly MIS ingestion job.
- Risk score rules + AI notes for intervention rationale.
- Tutor/team worklist export and exception alerts.

Data accessibility: 2/5 (internal-data-heavy).

Pros: strong impact potential. **Cons:** operational adoption is critical.

6) Course Recruitment Conversion Intelligence Fee: Medium

What you would build: enquiry-to-enrolment funnel intelligence by course/campus/channel with stage loss diagnostics and prioritized corrective actions.

- Ingest enquiry, application, offer, acceptance, enrolment events.
- Create stage conversion score and leak detection rules.
- Dashboard with conversion by channel and course-level action list.

Data accessibility: 2/5 (internal funnel and CRM data).

Pros: commercially understandable. **Cons:** requires alignment across admissions and marketing workflows.

7) Course Content Quality Scoring and Rewrite Fee: Medium

What you would build: direct extension of existing rewrite stack to course pages: scrape page copy, assess clarity/completeness, propose rewrites with evidence, and project uplift.

- Reuses rewrite engine components in `src/lib/rewrite-engine.ts` and evidence model in DB.
- Adds course-specific scoring dimensions (entry requirements clarity, outcomes clarity, employer relevance).
- Publishes content improvement queue with owner and status.

Data accessibility: 4/5 (mostly public website content).

Pros: high reuse, fast delivery. **Cons:** needs editorial governance process.

8) SEND and High-Needs Progression Intelligence Fee: Medium

What you would build: progression intelligence for high-needs learners: support-plan status, intervention effectiveness, and progression outcome tracking.

- Secure ingestion pipelines for sensitive support/learning records.
- Risk and progression scoring with explainable flags.
- Governance dashboard for specialist teams and leadership.

Data accessibility: 2/5 (sensitive internal data).

Pros: high mission alignment. **Cons:** higher governance/compliance overhead.

9) Work Placement and T Level Capacity Intelligence Fee: Medium

What you would build: placement demand/supply planner with capacity forecasting and at-risk placement alerts by sector and employer.

- Combine learner placement demand with employer placement capacity feeds.
- Capacity fit score and forecast gap scoring.
- Action centre for placement shortfall mitigation.

Data accessibility: 3/5 (mixed internal and external inputs).

Pros: practical operational value. **Cons:** employer feed freshness can vary.

10) Funding Opportunity and Bid Intelligence Fee: Low-Medium

What you would build: funding-call watcher with strategic-fit scoring, bid/no-bid recommendations, and evidence checklist generator.

- Public feed ingestion for funding calls and deadlines.
- Fit score using Kirklees strategic themes and delivery track record.
- Bid tracker dashboard plus deadline alerts.

Data accessibility: 5/5 (public-data-first).

Pros: low data friction. **Cons:** usage peaks around bid cycles.

11) Student Destination and Outcomes Intelligence Fee: Medium

What you would build: destination pipeline that links learners to progression outcomes with quality indicators by program and cohort.

- Ingest completion and destination evidence from internal plus external sources.
- Outcome quality score and trend movement.
- Board and curriculum views with confidence markers for missing evidence.

Data accessibility: 3/5 (mixed internal and external).

Pros: strong narrative value. **Cons:** lag and completeness issues in destination data.

12) Timetable and Room Utilization Intelligence Fee: Medium

What you would build: utilization monitor for room occupancy, scheduling clashes, underused assets, and timetable optimization opportunities.

- Ingest timetable, attendance, and room metadata feeds.
- Utilization efficiency score and conflict severity flags.
- Action queue for rescheduling and estate optimization.

Data accessibility: 2/5 (internal systems dependent).

Pros: strong efficiency angle. **Cons:** integration and adoption effort required.

13) Competitor Offer Intelligence Fee: Low-Medium

What you would build: regional competitor monitor for course launches, messaging shifts, and target-audience positioning changes.

- Public website and publication monitoring pipeline (terms-respecting).
- Differentiation and overlap scoring by subject area.
- Monthly competitor movement brief.

Data accessibility: 4/5 (mostly public with terms caveats).

Pros: strategic positioning support. **Cons:** often secondary budget priority.

14) Green Skills Impact Intelligence Fee: Low-Medium

What you would build: impact measurement dashboard tracking green curriculum activity, employer engagement, learner outcomes, and strategic evidence.

- Public policy/funding feed plus internal program metrics.
- Green impact scorecards by curriculum area.
- Exportable evidence packs for stakeholders and bids.

Data accessibility: 4/5 (public-data-friendly plus internal metrics).

Pros: policy alignment. **Cons:** direct ROI can be less immediate.

15) Reputation and Community Signal Intelligence Fee: Low-Medium

What you would build: monitored signal layer for public sentiment themes, issue spikes, and stakeholder concern alerts.

- Public signal ingestion with source quality controls.
- Theme and severity classification with false-positive suppression.
- Leadership briefing page and incident watchlist export.

Data accessibility: 3/5 (public signals but uneven source constraints).

Pros: early warning value. **Cons:** noisy signals if not tightly governed.

5. Comparative Matrix (Including Data Access)

Scale 1 to 5. Higher is better for Strategic Fit, Willingness to Pay, Data Access, and Reuse Fit. Lower is better for Complexity and Sales Friction.

#	Idea	Strategic	Pay	Data	Complexity	Sales	Reuse	Build Reality Comment
1	Employer	5	4	3	3	3	4	Clear value but needs strong CRM data hygiene.
2	Apprenticeship	5	4	2	3	3	4	High-value; internal data plumbing is the main build factor.
3	Skills Radar	4	3	4	3	3	4	Public data helps speed, confidence signalling is key.
4	Ofsted	5	4	3	3	2	4	Strong sponsor pull, must tie evidence to execution.
5	Attendance	5	3	2	3	3	4	Actionability is high when intervention capacity exists.
6	Conversion	4	3	2	2	3	5	Fast operational wins if admissions workflow aligns.
7	Content Rewrite	4	3	4	2	2	5	Most direct extension of existing rewrite capabilities.
8	SEND	5	3	2	4	3	3	High impact but governance and sensitivity load is high.
9	Placement	4	3	3	3	3	4	Good operational service if employer capacity data is maintained.
10	Bid	3	3	5	2	2	4	Best data-access profile; cyclical demand profile.
11	Destination	4	3	3	3	3	4	Strong board narrative, needs confidence markers for lag.
12	Utilization	4	3	2	3	3	4	Internal systems are dominant dependency.
13	Competitor	3	2	4	2	2	4	Useful strategic add-on, rarely the

#	Idea	Strategic	Pay	Data	Complexity	Sales	Reuse	Build Reality Comment
								primary buy.
14	Green Skills	4	2	4	2	2	4	Policy-aligned; direct budget ROI case can be softer.
15	Reputation	3	2	3	3	2	3	Signal quality management drives credibility.

6. Partner Discussion Questions

1. Which 3 ideas give us the best balance of contract value, delivery certainty, and data accessibility?
2. Which ideas can we deliver with minimal net-new engineering by reusing existing pipeline/review/report patterns?
3. Where do we need internal data sharing agreements before pitching?
4. Which ideas are best as a combined package instead of standalone services?

7. Source Notes

- Kirklees College public pages and published statements (including accountability and financial statements).
- Ofsted published inspection report for Kirklees College.
- SensAI internal architecture and deep-dive artifacts in `_bmad-output/planning-artifacts`.
- Current implementation structure in `nuffield-health/src`.

Internal strategy report for partner discussion. Fee ranges are indicative and should be calibrated with final scope and procurement route.
